

Reverse Circulation Drilling

with Patented Grout Through Hammer

Holte Manufacturing was an early pioneer of reverse circulation technology. From the beginning, almost 30 years ago, Holte recognized the significant advantages of this style of drilling, particularly large diameter, and has remained dedicated to developing a complete line of drilling tools specifically designed around reverse circulation technology.

Holte's patented technologies allow the most efficient use of air flow in the industry allowing your hammer to hit harder in turn removing rock faster through our down hole hammer and bit, while our accessories are designed to work most efficiently with your rig and ground conditions.

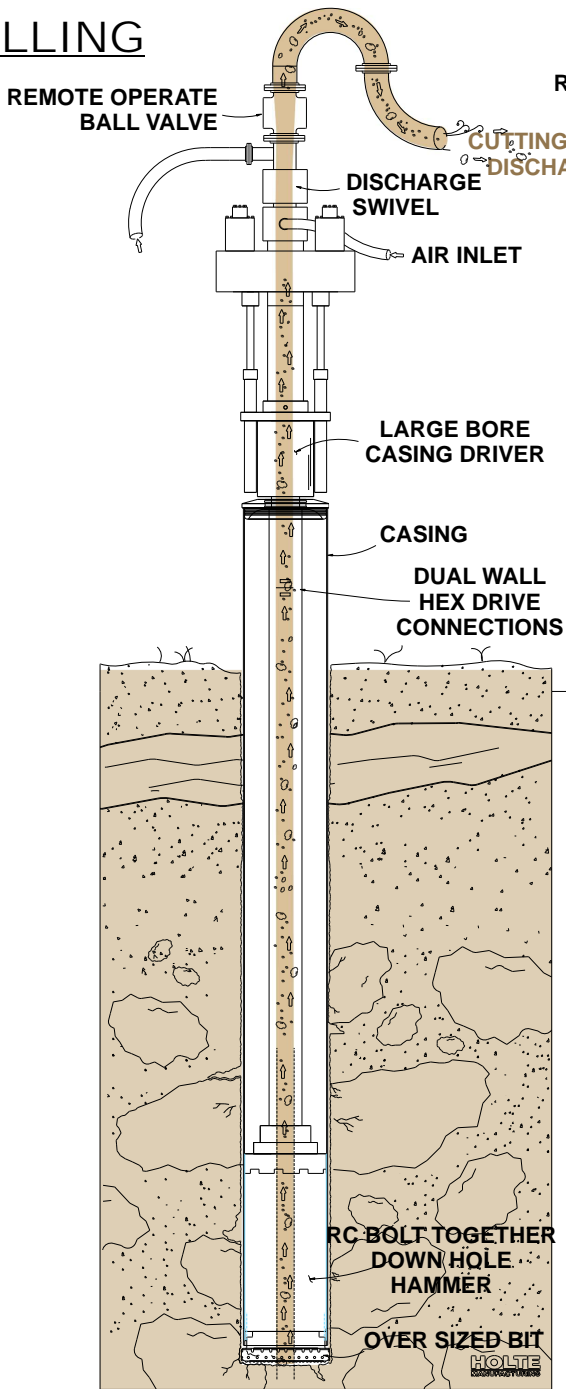

Benefits: Ultimate control of cutting removal and containment. Reduces air loss into formation. Less impact in sensitive areas. Energy efficient. Drill and grout in one pass.
